Koneksi Esp32 ke
Thingsboard

01

PENGENALAN

GOAL

- Memahami sistem Platform Thingsboard dan metode koneksinya
- Membuat program sensor dan kontrol ESP32 melalui Thingsboard
- Memulai dengan ESP-NOW

IOT PLATFORM VS DASHBOARD

A Dashboard can Usually

- Display data
- Control devices

However an IOT platform can Usually

- Collect data from various sources
- Store data
- Control Devices
- Display Data
- Run Tests
- Deploy device updates
- Manage device Inventory

PLATFORM IOT

Thingsboard -open-source IoT platform for device management, data collection, processing and visualization

Thingstream -provides low power, low cost, ubiquitous IoT connectivity via MQTT over GSM.

ThingWorx–powerful industrial IoT applications and augmented reality (AR) experiences.

Thingspeak -ThingSpeak is the open IoT platform with MATLAB analytics.

Wolkabout – Combines different devices and services into a complete IoT solution.

OpenRemote – 100% open source IoT platform running in Docker. It can be installed on local hardware, starting with RaspberryPi4, or hosted servers.

OTHER IOT PLATFORM

IoTgo -IoTgo is an open source IoT platform, like WordPress, ZenCart

kaa -Kaa is an open-source IoT platform

datacake – Low cost, low code IOT platform also offering node-red hosting.

DASHBOARD (MQTT)

Node-Red – Open source Node.js based platform for flow based programming.
Device management using the node-red UI.

Freeboard.io – Open source -Very popular but doesn't currently support MQTT
out of the box

DASHBOARD (ANDROID BASED)

MQTT Dashboard
MQTT Dash

Mqtt Dashboard

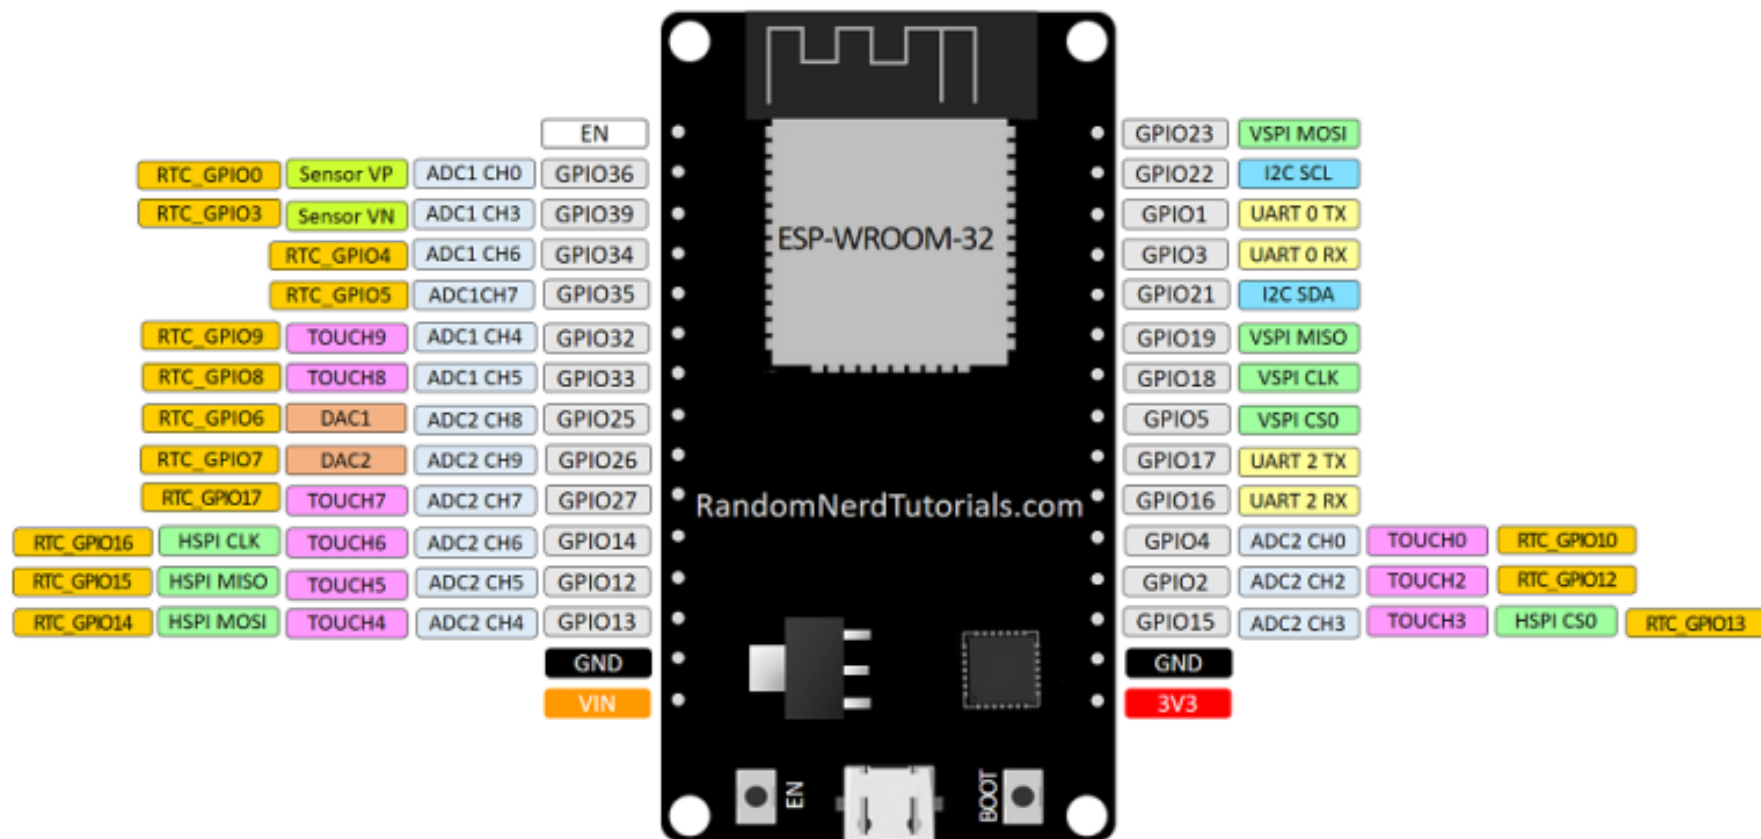

Control IoT devices, Node-RED and more
using MQTT messaging
protocol.

THINGSBOARD RPI

Tentang Thingsboard

ESP32 DEVKIT V1 – DOIT

version with 30 GPIOs

ESP32 DEVKIT V1 – DOIT

version with 36 GPIOs

* Pins SCK/CLK, SDO/SD0, SDI/SD1, SHD/SD2, SWP/SD3 and CSC/CMD, namely, GPIO6 to GPIO11 are connected to the integrated SPI flash integrated on ESP-WROOM-32 and are not recommended for other uses.

RASPBERRY PI

Raspberry Pi Boards

Raspberry Pi Zero

Raspberry Pi 3 Model B

Raspberry Pi 4 Model B

Raspberry Pi 3 Model A+

Raspberry Pi 3 Model B+

Raspberry Pi 2 Model B

Raspberry Pi 1 Model B+

Raspberry Pi 1 Model A+

Raspberry Pi Zero W

RASPBERRY PI 3

4x USB
Power micro usb
HDMI display
Camera interface
Ethernet
GPIO

Mico sd

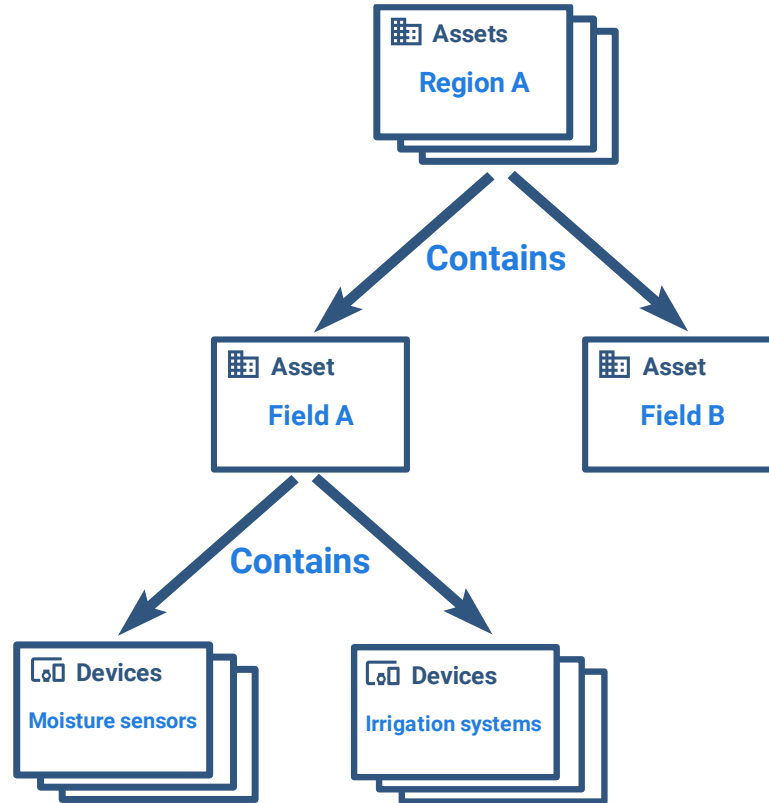

THINGSBOARD DASHBOARD

ThingsBoard is an open-source server-side platform yang memungkinkan untuk monitor dan control perangkat IoT. Gratis untuk digunakan secara personal dan commercial dan dapat digunakan dimana saja

THINGSBOARD USER

- **System Administrator:** sysadmin@thingsboard.org / sysadmin
- **Tenant Administrator:** tenant@thingsboard.org / tenant
- **Customer User:** customer@thingsboard.org / customer

ASSET DAN CUSTOMER

TELEMETRI DATA

- **Collect** data from devices using various protocols and integrations;
- **Store** time series data in SQL (PostgreSQL) or NoSQL (Cassandra or Timescale) databases;
- **Query** the latest time series data values or all data within the specified time range with flexible aggregation;
- **Subscribe** to data updates using WebSockets for visualization or real-time analytics;
- **Visualize** time series data using configurable and highly customizable widgets and dashboards;
- **Filter and analyze** data using flexible Rule Engine;
- **Generate** alarms based on collected data;
- **Forward** data to external systems using External Rule Nodes (e.g. Kafka or RabbitMQ Rule Nodes).

JSON DATA POINT

```
{  
  "temperature": 42.2,  
  "humidity": 70,  
  "hvacEnabled": true,  
  "hvacState": "IDLE",  
  "configuration": {  
    "someNumber": 42,  
    "someArray": [1,2,3],  
    "someNestedObject": {"key": "value"}  
  }  
}
```

DEVICE CONNECTION PROTOCOL

HTTP

Linux, macOS or Windows

MQTT

Linux or macOS

MQTT

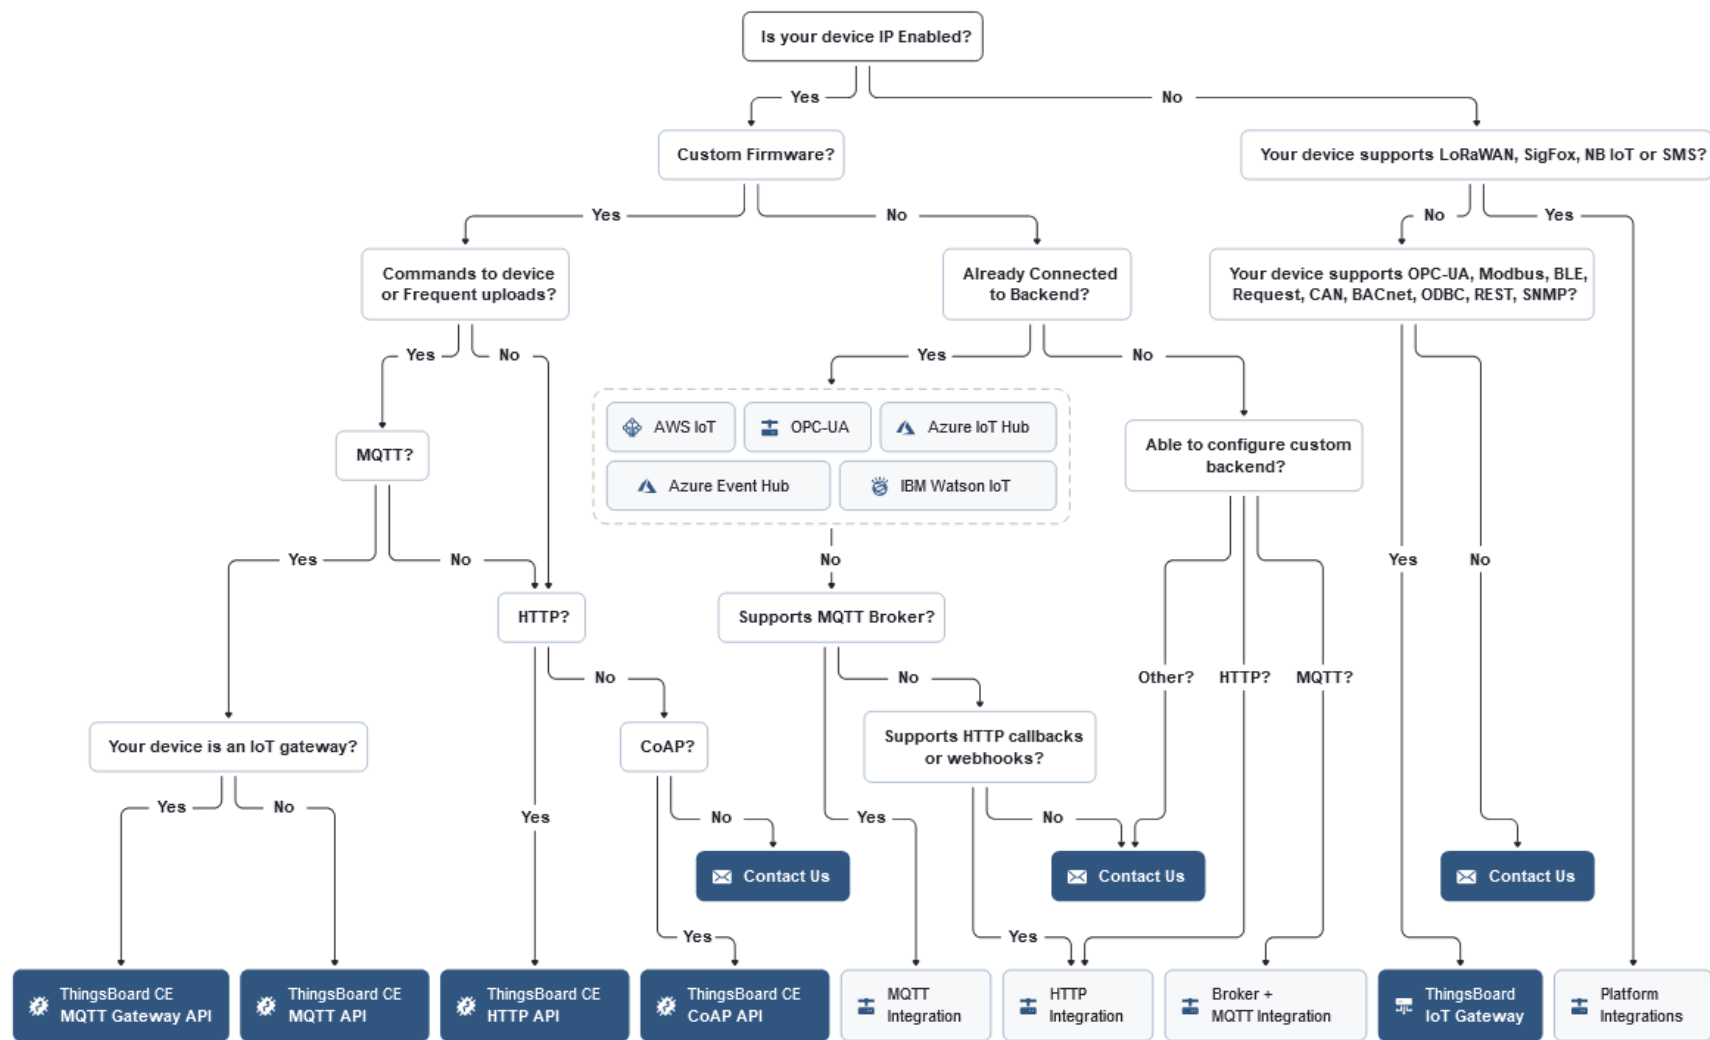

Windows

CoAP

Linux or macOS

Other Protocols

Modbus, SNMP, LoRaWAN, etc

ESP32 CONNECTION

Buat project baru pada Platform IO
Koneksikan sensor yang akan di ambil data
Buat koneksi Wi-Fi
Kirim data menggunakan library thingsboard

```
lib_deps =  
  thingsboard/ThingsBoard@^0.5  
  knolleary/PubSubClient@^2.8  
  arduino-libraries/ArduinoHttpClient@^0.4.0  
  bblanchon/ArduinoJson@^6.18.5  
  beegee-tokyo/DHT sensor library for ESPx@^1.18  
  ottowinter/ESPAsyncWebServer-esphome@^2.0.1  
monitor_speed = 115200
```

The slide features a minimalist design with decorative geometric elements. In the top-left corner, there is a grey triangle with a thin black line extending from its vertex towards the center. In the bottom-right corner, there is a grey triangle with a thin black line extending from its vertex towards the center. The main title is centered in the upper half of the slide.

KONFIGURASI DEVICE

Provision Perangkat (device)
Provision Asset
Provision Dashboard data

ESP 32 MULTI KONEKSI

PROFILE

Unik Device profile
Unik Asset (Create Relation)
Provision Dashboard data
Membuat state khusus

ESP-NOW

Connectionless communication protocol developed by espressif

Short packet transmission (up to 250 bytes)

Komunikasi tanpa menggunakan Wi-Fi

Mirip komunikasi 2.4Ghz perangkat low power seperti mouse wireless

System menggunakan pairing tanpa hand shake

Maksimum 20 node open dan 10 node jika dengan enkripsi

No router atau dhcp server

No overhead

No lost time to connect

THANKS
